Abstract:

The article highlights the specific of educational process with different Information and Communication Technologies (ICT) being implemented. During the era of global information education gets an absolutely new form due to ICT. These changes are resulted from the information availability at any place of our world. New technologies in educational sphere provide cooperation "Teacher-Student" in an open and distance training. Thus a type of modern teacher is being formed. He must not only have knowledge in the field of ICT, but also be able to use them in their own work. There is also a different type of student being formed today. Modern students cannot imagine their life without PC and Internet, which stores about 2 billion multimedia documents and provides immediate access to global information resources.

The questions about how ICT influences the level and quality of education, about positive and negative side of this influence are being discussed in this article. There is also a question about didactic and methodological tasks, solved with the help of Information and Communication Technologies. The author tries to find answers to these questions using her own experience and examples of educational process at Art-and-Graphic Department of Kursk State University.
